

Portico Virtual Terminal

Heartland Portico Virtual Terminal (Portico VT) is a web-based “virtual terminal” that processes credit and debit cards over a secure internet connection. Portico Virtual Terminal records the card information and dollar amount, then transmits this information to Heartland for further processing. Heartland then contacts the credit card issuer, receives an authorization and displays the issuer’s authorization response. All you need is access to the internet and a computer!

Key Benefits

- Supports the latest industry required security standards for encryption
- Intuitive user interface used for user efficiency
- Enhanced to work on newer browsers including MAC-Safari, Internet Explorer 11, Chrome and Edge
- Supports all features from the Silverlight Portico VT
- Added support for EMV compliant devices - ISC250
- HTML5 and Angular instead of outdated Silverlight technology
- Provides more flexibility for future enhancements

Competitive Advantage

Portico Virtual Terminal doesn't restrict the user to a single PC or location. The customer can log in from any location and process online sale 24 hours/365 days a year. Merchants in various verticals can safely utilize this product, including retail, restaurant, mobile or professional services. With over 20,000 merchants using Portico VT, it's a proven reliable product for on-demand processing as a backup solution or upsell to complete your WIN!
